Meets and Exceeds ANSI Z87.1-2003 & EN 166:2001 Standard

Micro-Fiber Bag & Cord

Replacement cycle too short? Two major causes of scratching are cleaning & storage. Most scratching occurs during the cleaning process or when eyewear is stored. Correct cleaning and storage procedures will increase the lifespan of the eyewear. Use the eyeglass cord. An added benefit is that they are always ON HAND when you need them most. Educating the workforce is one solution, providing them the tools is another. At CanaSafe we do both. They're included.

New FulcrumXS™ eyewear advances design and comfort to new heights. So form fitting, it's like every pair is custom molded. Never before has adjustment felt so natural, whilst blending the lens with the facial outline to provide optimum coverage.
